**Subject:** PSE Healthy Energy\_1 week, 3 new studies

[www.psehealthyenergy.org](http://www.psehealthyenergy.org)

Dear [REDACTED],

This has been a very big week for PSE Healthy Energy and I wanted to tell you all about it! Three peer-reviewed articles written or co-authored by PSE staff and leadership have been released over the past 4 days and are changing energy headlines across the U.S. and the world. [Your generous support today](#) can help us to reach even more media sources and to generate and translate more critical studies.

- **April 14, 2014.** An [atmospheric field-sampling study](#) published in the Proceedings of the National Academy of Sciences demonstrates 100x to 1000x higher emissions while wells are still being drilled than previously accounted for in inventory emission estimates. This is a BIG climate issue. PSE Healthy Energy researchers, Tony Ingraffea and Renee Santoro are co-authors on the study. Here are some links to press coverage from [Huffington Post](#), [LA Times](#), [Salon](#), [Climate Central](#), and [Australian Herald](#).
- **April 16, 2014.** We published a [paper](#) in the scientific journal, Environmental Health Perspectives on the public health dimensions of shale and tight gas development -- everything that is known to date on the subject in one place. Hooray! Even better, this paper is open-source so everyone has access. Here's some press from [Mother Jones](#) and a link to our [Press Release](#)
- **April 18, 2014.** We also published an [editorial](#) in the British Medical Journal (BMJ) that critiques the shoddy work by Public Health England, the UK's health department, in their review of public health risks from shale gas development. The press release can be found [here](#) and I've already interviewed with [The London Times](#) and Al Jazeera television. Other coverage includes [The Information Daily](#)

You can download full-text pdf files of all three papers [here](#).

I hope you find these new studies informative and useful. Generating original science and reviewing current science are key components of our mission to bring scientific transparency to these issues and to empower citizens and policy-makers. **We couldn't have done it without the continued support of PSE Healthy Energy members and donors.**

Please consider a gift or membership enrollment to PSE Healthy today. Your support

ensures that we can continue to provide high-quality, evidence-based information for thoughtful energy decisions. Of course sending this around to your friends, family, and colleagues would be great.

Quick link to [PSE's secure online donation/membership](#)

Best Regards,

Seth B. Shonkoff, PhD, MPH
